

***Remarks***

Upon entry of the foregoing amendment, claims 38-210 are pending in the application, with 38, 62, 91, 114, 141, 169, and 190 as the independent claims. Claims 1-37 have been cancelled without prejudice to or disclaimer of the subject matter therein. New claims 38-210 have been added. It is believed that these changes introduce no new matter, and their entry is respectfully requested.

Support for the new claims can be found throughout the specification. For the Examiner's convenience, **Table 1** (attached) sets out examples of locations where support for the new claims can be found in the present application and priority Appl. Nos. 08/159,184, 08/278,634, and 08/103,396. Applicants will provide examples of locations where support may be found in the other priority applications at a later time, if the Examiner so wishes.

Applicants also provide in **Table 2** (attached), a list of each peptide recited in the claims (those recited in the independent claims are indicated by claim number), the peptide number and identity of the prostate antigen where the peptide is found, and the filing date and serial number of the application in which the peptide was first disclosed by Applicants.

The specification has been amended to change the cross-reference to related applications and to incorporate material from the priority applications, such as Appl. No. 08/159,184, filed November 29, 1993, which were incorporated into the original application.

Respectfully submitted,

STERNE, KESSLER, GOLDSTEIN & FOX P.L.L.C.

The present application is also related to PCT application 99/12066 filed 5/28/99 which claims benefit of provisional U.S.S.N. 60/087,192, and U.S.S.N. 09/009,953, which is a CIP of abandoned U.S.S.N. 60/036,713 and abandoned U.S.S.N. 60/037,432. In addition, the present application is related to U.S.S.N. 09/098,584, U.S.S.N. 09/239,043, U.S.S.N. 60/117,486, U.S.S.N. 09/350,401, and U.S.S.N. 09/357,737. In addition, the present application is related to U.S. Patent Application entitled "Inducing Cellular Immune Responses to Carcinoembryonic Antigen Using Peptide and Nucleic Acid Compositions", Attorney Docket No. 018623-014400, filed 12/10/99; U.S. Patent Application entitled "Inducing Cellular Immune Responses to p53 Using Peptide and Nucleic Acid Compositions"; Attorney Docket No. 018623-014500, filed 12/10/99; U.S. Patent Application entitled "Inducing Cellular Immune Responses to MAGE2/3 Using Peptide and Nucleic Acid Compositions", Attorney Docket No. 018623-014600, filed 12/10/99; and U.S. Patent Application entitled "Inducing Cellular Immune Responses to HER2/neu Using

Peptide and Nucleic Acid Compositions", Attorney Docket No. 018623-014800, filed 12/10/99. All of the above applications are incorporated herein by reference.

*The paragraph beginning at page 15, line 1 has been replaced with the following paragraph:*

The term "peptide" is used interchangeably with "oligopeptide" in the present specification to designate a series of residues, typically L-amino acids, connected one to the other, typically by peptide bonds between the  $\alpha$ -amino and carboxyl groups of adjacent amino acids. The preferred CTL-inducing peptides of the invention are less than about 15 residues in length, and are often 13 residues or less in length and usually consist of between about 8 and about 11 residues, preferably 9 or 10 residues. The preferred HTL-inducing oligopeptides are less than about 50 residues in length and usually consist of between about 6 and about 30 residues, more usually between about 12 and 25, and often between about 15 and 20 residues.
